HOPPECKE at LogiMAT 2024: GO GREEN – OPTIMISE YOUR FOOTPRINT WITH HOPPECKE

Space-saving in intralogistics - that's one of the topics on this year's booth of the largest family-run battery manufacturer in Europe.

Visitors can expect the latest energy systems as well as valuable content on the topics of saving space and energy, sustainability and digitization of the battery fleet.

At the HOPPECKE booth F33 in hall 10, visitors can not only learn more about the established product range but also about one product in particular: the mobile outdoor charging station trak | systemizer powercube with its diverse components, including batteries, chargers and monitoring systems.

HOPPECKE trak | systemiser powercube - Charge and change batteries outdoors

trak | systemizer powercube is a mobile turnkey charging station that can easily be placed outdoors. As a result, it frees up valuable indoor space for the core business. The flexible extensions - there is usually enough space on the outdoor area - also enable **a variable response to peak loads or seasonal business**.

Because the outdoor solution from HOPPECKE requires nothing more from the customer than an electrical connection, it **can be set up anywhere** on the company's site. The mobile solution is available in a choice of two sizes, delivered to the customer ready for use. In addition to flexibility in terms of its location, users also have flexibility in purchasing and in changes of battery type. trak | systemizer powercube can be flexibly enlarged or reduced at any time. Almost all battery types can be charged and changed in the station. trak | systemizer powercube provides room for batteries, chargers and monitoring systems. Lighting and the ventilation system come already installed, as do the airflow monitoring and acid containment trays. trak | systemizer powercube can also be expanded with numerous options: For example, a sprinkler system, gas warning system or fire protection panels.

Recently, HOPPECKE has launched a **new, optimized version** of the **patented** charging station. Visitors can expect a new design and additional functions at this year's booth F33 in hall 10.

Fred Gadalla, Director of Export Sales and HOPPECKE booth manager at LogiMAT 2024, is looking forward to this year's LogiMAT: "I am thrilled that our mobile solution will take centre stage in our booth at LogiMAT 2024. In the trak | systemizer powercube, logistics providers benefit from a host of advantages. With the optimised version, we have been able to expand on the positive attributes and advantages for logistics specialists. Visitors can look forward to new features, including an additional canopy and more space, which is now also available for larger batteries."
