

Our innovative **trak | uplift** battery series with a longer service life than conventional batteries - now also confirmed by DNV GL

Having our own quality standards confirmed by independent associations is always a great thing. We are very pleased that DNV GL, as a worldwide independent certification, classification and consulting company, has confirmed that our trak | uplift products have a cycle life of up to 1,700 nominal cycles*, and therefore have an increased battery life compared to conventional batteries.

longer
battery
life

Since 1927, we have been using our concentrated know-how to offer you an individually tailored solution to suit your requirements. The continuous development and improvement of our products is very important to us. Thanks to leading research and development activities, HOPPECKE has all of the proven and innovative storage technologies in its portfolio. By specifically redesigning all components of the trak | uplift battery series, we were able to achieve such a remarkable increase in service life.

Your benefits with **trak | uplift**

- Increased service life
- High quality - low procurement costs
- Active Carbon ensures improved fast charging capability
- Ultimate service life in systems with HOPPECKE chargers
- Low maintenance costs
