

trak | uplift ex

Explosion-proof,
ATEX certified batteries

Maximum Safety & highest quality standards

trak | uplift ex is a special battery solution for the use in industrial trucks in potentially explosive areas. Being certified and produced according to ATEX guideline 2014/34/EU, it guarantees maximum safety in potentially explosive environments.

HOPPECKE trak | uplift ex is equipped with a gas spring as well as a hex lock offering the greatest possible industrial safety and user-friendliness. The unique HOPPECKE tray and the HOPPECKE ex-cells contribute to this. The fully sealed and insulated terminal-cell connector system prevents short-circuit and corrosion of the external current conductor.

Customer-specific & always application-oriented

An individually adapted direct current connector as well as a battery tray on the basis of customer-specific vehicle dimensions are applied with trak | uplift ex.

trak | uplift ex offers a complete product range for the categories 2 and 3 up to temperature class T6 (80 °C).

The HOPPECKE product management works closely together with vehicle manufacturers and associations and, thus, guarantees technologically-innovative and application-oriented solutions.

Own factory customer service for appropriate maintenance

HOPPECKE has an extensive and specifically trained service network. Our extensive and proven service portfolio covers the entire life cycle of your energy storage and the entire energy system.

Your advantage with HOPPECKE

- One of the safest and user-friendliest tray designs on the market
