Industrial services

trak | optimizer

The continuous maintenance, inspection and service of energy storage systems is essential in order to ensure energy availability and, hence, stable processes, to comply legal duties and not least to protect people and capital.

The main aspect of our industrial services is ensuring energy availability and operational safety. Our HOPPECKE factory customer service supervises all of your energy storage systems, chargers, charging stations and battery rooms. With the trak | optimizer, our employees are at your site all the

time – on request up to a 24/7 shift coverage. This is independent of the technology, the use or the manufacturer.

Each offer from HOPPECKE is customised individually for your specific in-house requirements and conditions. You receive an individually developed service solution by which we integrate into your current procedures in the best possible way. With trak | optimizer, the customer is the centre of our actions and mirrors our understanding of a strategic partnership und a strong customer orientation.
